

What was achieved last week?

- Successfully set up and explored the backend environment using Postgre and pgAdmin.
- Gained a foundational understanding of how backend systems interact with databases.

What is the focus for today?

- Strengthen understanding of data flow from the database to the backend.
- Continue connection with the frontend

What blockers exist?

- Ongoing challenges with database connection configuration, including credentials and setup.
- Occasional errors encountered in queries and backend responses.
- Need for deeper understanding of full frontend-backend integration processes.

What went well?

- Able to fix error with github with the members

What didn't go well?

- Experienced difficulties with communicating with the members because of being late.

What should we start doing?

- Continue to communicate well and fix error together.

What should we continue doing?

- Continue communicate with members and should always be early to school so that we can start the project early
