# Progress Report

**Name:** Domen, Jhanine B.

**Project:** Attendance Management System

## April 4, 2026

### Task: Enhanced UI/UX and Integrated Full Functionality

***What I Did:***

1. **Improved UI/UX Design:**
    a. Made the dashboard, students, teachers, courses, enrollments, and attendances pages look better.
    b. Used Bootstrap and custom CSS for a modern and responsive layout.
    c. Added color-coded status indicators (green for Present, red for Absent, orange for Late).
2. **Created Views for CRUD Operations:**
    a. **Students Module:** Made Index, Create, Edit, and Details pages.
    b. **Teachers Module:** Made Index, Create, Edit, and Details pages.
    c. **Courses Module:** Made Index, Create, Edit, and Details pages.
    d. **Enrollments Module:** Made Index, Create, Edit, and Details pages.
    e. **Attendances Module:** Made Index, Create, Edit, and Details pages.
3. **Added Dynamic Functionality with JavaScript:**
    a. Added search functionality to filter records.
    b. Implemented status filters to show records based on their status.
    c. Added date and time pickers for better user input.
    d. Added confirmation dialogs for delete operations.
4. **Connected Backend Logic:**
    a. Made sure all views are connected to their controllers and services.
    b. Verified that CRUD operations (Create, Read, Update, Delete) work properly.
5. **Fixed and Optimized Code:**
    a. Fixed Razor syntax errors and ensured proper model binding.
    b. Registered all services in `Program.cs` using Dependency Injection.
    c. Cleaned up and optimized the code for better performance.

***Problems Encountered:***

- **JavaScript Errors:**
  - Issues with initializing date and time pickers.
  - Search functionality not filtering records correctly.
- **Model Binding Issues:**
  - Form inputs not binding correctly to ViewModel properties in some views.
- **Razor Syntax Errors:**
  - Errors in Razor views due to incorrect syntax and loops.

***How I Solved It:***

- **Fixed JavaScript Errors:**
  - Made sure all required JavaScript libraries are loaded.
  - Corrected the initialization of date and time pickers.
  - Debugged and fixed the search functionality.
- **Resolved Model Binding Issues:**
  - Made sure form input names match the ViewModel properties.
  - Used `asp-for` tag helpers correctly in Razor views.
- **Corrected Razor Syntax Errors:**
  - Fixed Razor loops and syntax errors in views.
  - Ensured proper placement of `@model` directives and corrected loops.

***Status: Completed***

# April 3, 2026

## Task: Developed Attendance Module (MVC Structure)

***What I Did:***

1. Created `AttendanceViewModel`, `AttendanceService`, and `AttendanceController`.
2. Connected the Controller to the Service using Dependency Injection.
3. Built `Index.cshtml` and `Create.cshtml` views.
4. Implemented Add, Display, and Delete for attendance records.
5. Added status indicators (Present/Absent) with colors.

***Problems Encountered:***

- Form data not binding correctly.
- Service not registered in `Program.cs`.
- Razor syntax errors in views.

***How I Solved It:***

- Matched input names with ViewModel properties.
- Registered the service using `AddScoped`.
- Fixed Razor syntax and corrected loops.

***Status: Completed***

# April 2, 2026

## Task: Built Attendance Module using MVC with Service Layer

***What I Did:***

1. Designed `ViewModel`, `Service`, `Controller`, and `Views`.
2. Implemented Add, Display, and Delete features.
3. Displayed records in a table format.
4. Used Razor syntax for dynamic data.
5. Added status styling (Present/Absent).

***Problems Encountered:***

- Model binding issues in forms.
- Missing service registration.
- Razor syntax and duplicate code errors.

***How I Solved It:***

- Fixed input names for correct binding.
- Registered services properly.
- Cleaned and corrected Razor code.

***Status: Completed***

# March 28, 2026

## Task: Developed Complete MVC System with Service Layer

***What I Did:***

1. Created modules: Student, Teacher, Course, Enrollment, Attendance.
2. Applied MVC Architecture (Models, Views, Controllers, Services).
3. Implemented CRUD operations (Add, Display, Delete).
4. Used Dependency Injection for all services.
5. Built dynamic Razor Views with tables.

***Problems Encountered:***

- Razor syntax errors and incorrect `@model` placement.
- Duplicate or broken loops in views.
- Missing service registrations.
- Form binding issues.

***How I Solved It:***

- Fixed Razor structure and cleaned code.
- Corrected loops and model placement.
- Registered all services using `AddScoped`.
- Matched form inputs with ViewModels.

***Status: Completed***
