PROGRESS REPORT

What went well last week?

Started improving the Enrollment page and fixed several frontend issues.

Worked on the dashboard, student, teacher, course, and enrollment pages to make the design cleaner and more functional.

What is the focus of today?

Continue fixing frontend errors, improve the Enrollment system functionality, and organize the project files and README documentation.

What blockers exist?

Some frontend functions and layouts are still not running properly.

There are also time constraints because of other school requirements and final projects.

What went well?

Successfully improved several pages of the Attendance Management System and added working features such as add, edit, delete, and search functions.

What didn't go well?

Some pages still have errors in JavaScript and layout styling.

There were also issues with modal functions and inconsistent button actions.

What should we start doing?

Start final testing of all system pages and fix remaining frontend bugs.

Continue updating the README file and improve system organization.

What should we stop doing?

Stop delaying testing and avoid leaving frontend errors unresolved for too long.

What should we continue doing?

Continue improving the UI design, fixing system functions, and maintaining teamwork and consistent project progress.
