

What was achieved last week?

API development, Database Integration, Setup PostgreSQL, and Migration.

What is the focus for today?

PostgreSQL connection, API endpoints error handling, Validation for the API

What blockers exist?

Duplicate or misconfigured connection strings caused startup errors. Errors in some parts of the code from making changes.

What went well?

We did a little bit of progress with the project.

What didn't go well?

We couldn't be able to communicate well resulting with a slow progress last week. Some members won't approach us for there progress and sometimes they get to school late or sometimes absent thats why a can't start the project early 'cause i did some information for the project as well and i can't start with it if they are not here. That is why Our Progress is very slow this week.

What should we start doing?

Communicate well with each other. Always be early to school so that we can make progress with our project. Document and testing always

What should we continue doing?

Collaborating actively. Testing frequently, Documenting solutions like notes on errors and fixes for shared learning.
